安装tdh步骤

1. 安装三台虚拟机，步骤略；vmware中安装，系统centos6.8
2. 配置网络参数，主要是配置静态ip；ip自定义；

/etc/sysconfig/network-scripts/ifcfg-eth0

DEVICE=eth0

HWADDR=00:0C:29:23:09:70

TYPE=Ethernet

UUID=9e559956-33fb-46b2-a47b-6648e1a1fcfe

ONBOOT=yes

NM_CONTROLLED=yes

BOOTPROTO=static

IPADDR=192.168.5.190

DNS1=8.8.8.8

DNS2=8.8.4.4

GATEWAY=192.168.5.1

3. 上传tdh的安装包到190机器；解压

```
[root@TDH1 ~]# ls
anaconda-ks.cfg  index.html    install.log.syslog  transwarp
derby.log        install.log   jstatd.all.policy   transwarp-4.7.1-Final-48403-zh.el6.x86_64.tar.gz
[root@TDH1 ~]# cd transwarp
[root@TDH1 transwarp]# ls
install        report        transwarp                   uninstall.sh
java_license   report.1      ui-window                   update_package_pdsh.sh
libdialog.so   REPORT_FILE   uninstall_agent_instance.sh update_package.sh
manager        script        uninstall_agent_template.sh VERSION
node_address   service_list  uninstall.log
process-ui     support       uninstall.log.1
```

4. 安装transwarp manager

执行./install.sh

图形化界面

会让你配置端口号，名称等，均默认就好了；端口8180

配置yum源：http://mirrors.aliyun.com/centos/6/os/x86_64/

5. 等待transwarp manager自动安装
6. 浏览器进入ip:8180,transwarp manager 界面安装软件；admin/admin
